Our vision

Sclerotherapy is the most widely used endovenous treatment technique in the world. It is a simple and efficient method to treat varicose veins. Its outcome (efficacy, safety, eventual side effects) however, is closely linked to the way the treatment is performed by the physician, which in turn is strongly connected to its teaching method.

The objective of the Kreussler International School of Sclerotherapy (K.I.S.S.) is to harmonise and optimise the sclerotherapy technique and skills on an international level. K.I.S.S. offers a training course platform to establish and teach international standards of diagnostics and injection technique.

The K.I.S.S training puts a strong emphasis on practical training with numerous live demonstrations of liquid and foam sclerotherapy on patients. Participants have the opportunity to engage in lively discussions with our dedicated experts and to benefit from their long-lasting experience. They can practise ultrasound diagnostics and improve their injection abilities on different vein models. Each K.I.S.S. training consists of two consecutive parts, each lasting two days, and separated by several months, in which the participants can implement what they have learned in their daily practice. Therefore, they will be able to present their own cases during the second course and to discuss their experiences with sclerotherapy with the experts. Having completed both parts of the K.I.S.S. training, all participants will receive a certificate confirming that they are able to

- perform proper ultrasound diagnostics on their CVI patients
- confidently establish a treatment plan
- treat all types of varicose veins effectively and safely with liquid and foam sclerotherapy using the optimal technique
- pass on the acquired knowledge to other colleagues.
